**Human Accelerated Environmental Change**

In your jigsaw group, discuss change globally and locally. Then, using the information provided, answer the questions in expert groups. Finally, meet with your jigsaw group again to learn about other changes that have taken place.

**Part 1: FOR ALL GROUPS: Jigsaw Group Guiding questions**

1. What are the major changes that have taken place globally?

   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

2. How are humans involved in these changes?

   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

3. What types of change do you think have taken place locally?

   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

**Part 2: Expert Groups**

**Group 1: Lyme Disease**

1. What do the map and the graphs tell you about Lyme disease in our area?

   ____________________________________________________________
   ____________________________________________________________

2. List all the possible reasons you can think of for the change in Lyme disease rates.

   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

3. How would you investigate the cause of the changes? Brainstorm, with your group, a possible experiment.

   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

4. Use the Resource Packet provided by your teacher to research possible answers.

5. Why do you think the incidence of Lyme disease has changed in our area? Use evidence to support your answer.

   ____________________________________________________________
   ____________________________________________________________
6. Based on the information you find, what recommendations would you make to land owners in order to reduce the incidence of Lyme disease? How confident are you in your answer? What else would you like to know?

Group 2: Hudson River Fish Changes

1. What has happened to the numbers of Rainbow Smelt in the Hudson?

2. What has happened to the numbers of Atlantic tomcod in the Hudson? Do you think the two graphs are related? Why?

3. List all the possible reasons you can think of for the two species’ declines.

4. How would you investigate the cause of the changes? Brainstorm, with your group, a possible experiment.

5. Use the Resource Packet provided by your teacher to research the changes.

6. Why do you think the fish species population has changed? Use evidence to support your answer.

7. Based on the information you find, what recommendations would you make to change the situation in the Hudson River? How confident are you in your answer? What else would you like to know?
Group 3: Pearly Mussel Declines in the Hudson River

1. What happened to the population of pearly mussels (unionids) in the Hudson River?

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

2. List all the possible reasons you can think of for the species’ decline.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

3. How would you investigate the cause of the changes? Brainstorm a possible experiment with your group and describe it below.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

4. Use the Resource Packet provided by your teacher to research the changes in the mussel population.

5. Why do you think the mussel population has changed? Use evidence to support your answer.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

6. What are the potential impacts of these changes on the river’s ecosystem? Is there anything else that could have caused the mussels’ decline? What else would you like to know to be more confident in your answer?

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

Group 4: Marsh Bird Population changes

1. How is the community of birds at Iona Island different from that of the other marshes?

__________________________________________________________________
__________________________________________________________________

2. List all the possible reasons for the differences in marsh bird communities.
3. How would you investigate the cause of the differences? Brainstorm a possible experiment with your group and describe it below.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

4. Use the Resource Packet provided by your teacher to research the changes.
5. Why do you think the bird community on Iona Island is different from the other marshes? Use evidence to support your answer.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

6. What does this data tell you about the relationship between common reed \textit{(Phragmites australis)} and birds? How confident are you in your answer? What more would you like to know?

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

7. Would you recommend the removal of the common reed? Why or why not? What else would you like to know before making this decision?

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

\textbf{Group 5: Acid Rain & Fish}

1. Describe the changes in the fish community over time.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

2. Why do you think the fish community changed so much? List all the possible reasons you can think of for the changes.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

3. How would you investigate the cause of the changes? Brainstorm a possible experiment with your group and describe it below.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
4. Use the Resource Packet provided by your teacher to research the changes.

5. Why do you think the fish community was so different in 2005-07 when compared with the 1960s? Use evidence to support your answer.

6. What other consequences might acid rain have for the aquatic ecosystems in the Adirondacks and for other parts of the country? What steps do you think should be taken to reduce the impacts of acid rain?

Part 3: Jigsaw Group
Take notes on the major changes that the other groups are describing.

<table>
<thead>
<tr>
<th>Group</th>
<th>Changes</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Which of the six major environmental changes are responsible for each group’s topic? Then, decide if these changes are permanent or temporary. How can you tell the difference? Discuss with your class what other types of information you would like to have to be certain about your decisions.

<table>
<thead>
<tr>
<th></th>

**Part 4: Reading**

Read the short article titled “Human Accelerated Environmental Change” and answer the following questions.

1. What are the major changes outlined by the author?

2. Why does the author believe that HAEC is more important than climate change?

3. How do you feel about this statement?

4. What do you think should be done?
